About Chemomab Therapeutics Ltd.

Chemomab is a clinical stage biotechnology company developing innovative therapeutics for fibro-inflammatory diseases with high unmet need. Based on the unique role of the soluble protein CCL24 in promoting fibrosis and inflammation, Chemomab developed CM-101, a dual activity monoclonal antibody that neutralizes CCL24 activity. In clinical and preclinical studies, CM-101 has been shown to have a favorable safety profile and has been generally well-tolerated, with the potential to treat multiple severe and life-threatening fibro-inflammatory diseases. Chemomab has reported positive results from four clinical trials of CM-101 in patients. Based on recent promising data from its Phase 2 trial in the rare liver disease primary sclerosing cholangitis (PSC), the company expects two upcoming milestones in early 2025, including FDA feedback on the design of its planned PSC Phase 3 registrational trial. CM-101 has received FDA and EMA Orphan Drug and FDA Fast Track designations for PSC. Chemomab's CM-101 program for the treatment of systemic sclerosis is Phase 2-ready with an open U.S. IND. For more information, visit www.chemomab.com.
