

Chemomab announces a peer reviewed publication of preclinical proof of concept data supporting the pivotal role of CCL24 in systemic sclerosis and idiopathic pulmonary fibrosis. The paper “Blockade of CCL24 with a monoclonal antibody ameliorates experimental dermal and pulmonary fibrosis” was published in May 2019 edition of “Annals of Rheumatoid Diseases” and supports the therapeutic potential of CM-101 for the treatment of patients with Systemic Sclerosis. Annals of Rheumatoid Diseases is a top line peer reviewed journal which publishes basic, clinical and translational novel scientific research, owned by the European League Against Rheumatism (EULAR) and BMJ.
